Summary

Computer Engineering graduate (2025) and full-stack developer with production experience at INEV Technologies, where I shipped a multi-tenant LMS, a React Native rental app, WordPress booking and workflow-automation plugins, and two Full Site Editing themes. Works across NestJS/Express, React/Next.js, React Native, PHP/WordPress, PostgreSQL/MySQL and Redis. Seeking a junior full-stack or software engineering role.

Technical Skills

- **Languages:** JavaScript, TypeScript, PHP, Python, SQL, C#, C++, GDScript
- **Frontend:** React.js, Next.js, Angular, React Native (Expo), HTML5, CSS3, Tailwind CSS, Bootstrap, Chart.js
- **Backend:** NestJS, Node.js, Express.js, REST APIs, Flask, PHP, WordPress (plugins, block themes, Gutenberg)
- **Databases & Data:** PostgreSQL, MySQL, MongoDB, Redis, Prisma
- **Tools & Security:** Git, GitHub, VS Code, XAMPP, Composer, Vite; JWT, RBAC, input validation
- **Other:** Godot Engine (2D/3D); Nepali (native), English (professional)

Experience

Full-Stack Developer 2026 *(1 year)*
INEV Technologies Bharatpur, Nepal

- Shipped production features across React/Next.js and Angular frontends and NestJS/Express and PHP backends, backed by PostgreSQL and MySQL.
- Built WordPress plugins and block themes with React admin dashboards, handling both frontend and server-side logic.
- Designed database schemas and wrote SQL/Prisma models for application features and reporting.
- Debugged across frontend, API and database layers; documented fixes and delivered on schedule in a Git-based team workflow.

Software Development Intern 2026 *(3 months)*
INEV Technologies Bharatpur, Nepal

- Implemented responsive interfaces and reusable components in React and Angular for client projects.
- Built and tested REST API endpoints with Node.js/Express and MySQL, covering valid requests, invalid input and error cases.
- Fixed bugs across WordPress/PHP pages and the MySQL layer; managed work with Git and GitHub.

Projects

Production work at INEV Technologies.

Learning Management Platform NestJS, Prisma, PostgreSQL, Redis, React, TypeScript

- Multi-tenant LMS serving separate institutes from one API, each with its own students, instructors, branding and payment setup, across public, student, teacher, admin and superadmin portals.
- Course delivery end to end: sections and lessons, quizzes and attempts, assignments, attendance, progress tracking, certificates, announcements and leaderboards.
- Checkout through Khalti, eSewa and Dodo Payments with invoices, instructor wallets, revenue splits and financial reporting.
- JWT auth with 2FA, Redis caching, BullMQ background jobs, WebSocket notifications, S3 storage, audit logging and Swagger documentation.

Rental Property Management App React Native, Expo, TypeScript, Express.js, Prisma, PostgreSQL

- Mobile-first platform for the full rental operation: properties, floors and flats, tenant invitations, monthly bills, payments, repairs, documents and reports, with separate landlord and tenant experiences.
- Tenant app for viewing bills, paying rent, raising repair requests, submitting meter readings and receiving push notifications; reports by month, property and tenant with QR-based payment profiles and role-based access.
- English and Nepali with biometric unlock, Google sign-in, offline-aware data fetching over a typed Express/Prisma API.

Appointment Booking Platform WordPress Plugin, PHP, React, TypeScript, MySQL

- Full appointment-booking engine for WordPress with public booking widgets, staff and customer portals and a reporting dashboard for salons, clinics and studios.
- Multi-step booking wizard (location, category, service, staff, time slot, confirmation) powered by a custom availability and slot-calculation engine.

- React admin SPA with revenue charts, calendar view, service/staff/CRM management and multi-location, multi-currency support; 18 custom database tables.
- Automated lifecycle emails (confirmation, reminder, reschedule, review request) via Gmail SMTP/OAuth, with Stripe payment tracking.

Visual Workflow Automation Engine WordPress Plugin, PHP, React, TypeScript, React Flow

- No-code trigger-to-action automation: a drag-and-drop workflow canvas over a queued execution engine covering core WordPress and WooCommerce triggers, branching logic, delays, retries and AI-powered steps.
- Visual React Flow editor with trigger/action/decision nodes, a searchable node palette, schema-driven config panels and pre-save graph validation.
- Queue-based execution via Action Scheduler with wait-until delays, exponential-backoff retries and error branches across roughly 37 node types.
- 12 ready-made templates (abandoned cart recovery, welcome sequences, low-stock alerts) with a TipTap rich-text email editor using variable autocomplete.

SaaS Product Marketing Platform WordPress Block Theme, PHP, Gutenberg, theme.json

- Custom Full Site Editing theme marketing a suite of SaaS products: per-product landing pages, pricing, download, blog, about, contact and legal pages.
- Documentation system on a custom post type with sidebar categories, breadcrumbs and filter tabs; blog with client-side category filtering.
- 35 block patterns driven by a roughly 900-line theme.json token system, plus custom mega-dropdown and filter blocks with Mailchimp newsletter wiring.

Digital Agency Web Platform WordPress FSE, PHP, Gutenberg, CSS Design Tokens

- Production FSE theme built from scratch without a page builder: 22 custom Gutenberg blocks with isolated CSS/JS and server-side rendering.
- Semantic design-token system with eight admin-selectable design skins, from glassmorphism to editorial, each with its own fonts and motion.
- Multi-route AJAX contact form with honeypot spam protection feeding a custom post type mini-CRM inbox with unread counts, statuses and bulk actions.
- First-run content seeding that auto-creates pages and menus on activation, with reduced-motion fallbacks and CLS-safe image handling.

Company work is private; personal project code is public at github.com/poudelaman4.

Service Provider Booking Platform GitHub Angular, Node.js/Express, MySQL

- Full-stack marketplace where customers discover services, book providers and leave reviews through role-based dashboards.
- Built a REST API with JWT auth, customer/provider/admin roles, validation, rate limiting and Cloudinary image uploads; designed the MySQL schema.

Movie Sentiment Analysis System GitHub Angular, Flask, MongoDB

- Full-stack app that scores movie reviews as positive, negative or neutral and visualizes per-movie sentiment with Chart.js.
- Flask API with JWT auth and TextBlob/NLTK sentiment analysis over MongoDB; Angular 18 interface with standalone components.

Smart Canteen Payment System *(Final Year Project)* GitHub PHP, MySQL, NFC

- Campus canteen platform with NFC card payments, student wallets, cart/order flow, an admin dashboard and sales, revenue and top-item analytics in PHP/MySQL.

Godot Game Projects GitHub Godot Engine, GDScript, C#

- Built 2D and 3D games, including a tower-defense project with enemy waves, physics, UI and difficulty scaling.

Education

B.E. in Computer Engineering 2025
United Technical College, Pokhara University, Nepal CGPA: 3.40/4.0
Relevant coursework: Data Structures & Algorithms, Database Management Systems, Operating Systems, Computer Networks, OOP.
